We welcome your R&D challenges

Contact PBS Plastics today for complete information about how our unique customer-focused approach offers your company the value and service you need with quality and durable plastic solutions.

Providing the line capacity, manufacturing expertise and dedication to personalized customer service necessary to deliver on short- or long-run orders, PBS Plastics is backed by three decades of success extruding customized tubing, parts and profiles for any size industrial, commercial or medical company.

As a certified ISO 9001:2008 company, PBS Plastics offers tighter tolerances and quality control due to:

- Our in-depth, hands-on knowledge of plastic extrusion processes
- An atmosphere that encourages hands-on problem solving at every level
- Close, strategic relationships with equipment and materials suppliers throughout the U.S.

A unique vision for tomorrow

You can count on us

PBS PLASTICS **PILLARS OF EXCELLENCE**
Quality Products | Trusted Value | Dedicated Service

Flexible manufacturing processes and responsive customer service define how we work.

Unlike large corporations, PBS Plastics is an independently owned and operated company with a “can-do” employee culture that supports continual product quality improvement and a company-wide passion for building long-lasting business connections based on communication and trust.

Extruded plastic for water filtration systems

Decades of experience extruding rigid and plastic tubing:

- Personal attention to every order
- Capacity to hit critical lead times
- Experienced R&D team
- Competitive pricing and on-time delivery
- Dedication to long-term partnerships

PBS Plastics continues to benefit from its founding vision as a customer service company that extrudes superior quality plastic tubing and profiles.

The PBS Plastics Agile Advantage™ to manufacturing offers exceptional value

At PBS Plastics, we have a vision for tomorrow’s custom extruded plastics market: To go beyond the traditional manufacturing model and paint a bigger picture of a smarter, more agile production solution backed by industry experts who operate with a “can-do” focus on delivering exceptional customer service.

Our innovative Agile Advantage™ service model emphasizes a more reliable customer service experience and delivers on the promise of high quality, durable and precise custom extruded plastic tubing and profiles.

Step 1: DISCOVERY Flexible and responsive service defines how we operate. We leverage our decades of experience to understand your needs and make achieving quality and durability a simple and transparent process.

Step 2: R&D We tackle new projects without hesitation. Our in-house lab is where we test new materials and optimize line performance to meet demanding specifications.

Step 3: CUSTOM EXTRUSION Look no further for capacity to hit the critical lead times you need. Whether extruding unique materials or cutting to custom lengths, we offer maximum line flexibility and project responsiveness.

Step 4: CUSTOMER SATISFACTION Our goal is to ensure your complete satisfaction, every step of the way – and beyond. Every team member personally aspires to delivering nothing less than product excellence.

“The one word I use to describe PBS is quality.”

Frank Keefe, Owner
CHESTERFIELD CUSTOM

“I’ve been working with PBS for over eight years. The customer service that I receive is excellent and the whole team is great to deal with!”

Industrial Extrusions

We offer tight tolerance tubing and profiles in a wide range of available materials to suit your specific application.

Coextrusion – Optimizing the properties of separate materials to save assembly time and enhance performance

Multi-Lumen Tubing – Tight tolerances and limitless combinations of shapes and thicknesses

Pipe – Multi-line operation capable of extruding pipe from 0.25" to 6" in diameter

Profiles – Basic to complex shapes and materials for a wide range of applications

Solid Shapes and Rods – Flexible or rigid plastics

Thermoplastic Elastomer (TPE) Tubing – Superb chemical, electrical and mechanical properties

Tubing – A variety of shapes compliant with FDA, UL and LE requirements

Our capabilities are your options

Because we’ve extruded plastic tubing and profiles critical to many industries, we are able to maintain a flexible and responsive manufacturing structure supported by a tight-knit, experienced team and decades-long partnerships with customers and suppliers.

We meet ANY need for a continuous plastic tube or profile:

- Custom color matching
- Rapid prototyping and 3D printing
- Tolerances as low as +/- 0.0015"
- Wall thicknesses to your exact specifications and as low as 0.008"
- Tubing diameters starting at 0.100"
- Complex shapes
- Wall offset to match performance needs
- Secondary options available

Any way you slice it
